The ideal diaphragm metering pump in the low-pressure range. LEWA ecodos is a safe, reliable and efficient diaphragm metering pump with mechanical diaphragm actuation that provides many options.

It is suitable for virtually all metering and pumping tasks in the low-pressure range up to 290 psig. Its product spectrum ranges from 0.11 gph to 396.26 gph per pump head. Its multiplex capability makes additional areas of application such as low-pulsation conveying, recipe metering and mixing jobs possible. LEWA ecodos meets the stringent requirements for production of food and beverages as well as pharmaceuticals in the sanitary and hygienic designs, respectively. This ensures it fulfills both aseptic and hygienic specifications with high levels of reliability and efficiency.
LEWA ecodos. The advantages at a glance.

1. **Hermetically tight**
   Diaphragm pumps work without dynamic seals, due to their design. This permits a hermetically tight working area. There are no external emissions and contamination of the fluid is impossible.

2. **Maximum operational safety**
   The 4-layer PTFE sandwich diaphragm is not only extremely stable and durable. It is also monitored continuously during operation using the diaphragm monitoring system.

3. **Exact metering setting**
   Even with pressures up to 290 psig, LEWA ecodos has a precise flow rate adjustment of ± 1%. The option of adjusting the pump using the stroke length and/or rotational speed makes it possible to achieve an exact, extensive adjustment range of up to 1:50.

4. **Multiple design options**
   With 6 output ratings and different material variants as well as adapted accessories, the diaphragm metering pump is suitable for virtually any pumping task in the low-pressure range.

5. **Mechanically actuated**
   No hydraulic oil is used in the pump as a result of the mechanical actuation. This means the conveyed fluid cannot become contaminated. This is particularly relevant for pharmaceutical applications.

6. **Worldwide service**
   LEWA is a global company. Spare parts and service are quickly available throughout the world.
LEWA ecodos is the pump for high demands at low pressures. It fulfills customer requirements in a wide variety of application fields thanks to its adaptability.

Areas of application.

Production of personal care products with LEWA ecodos sanitary for easy and thorough pump head cleaning.
LEWA ecodos hygienic for the stringent requirements of the pharmaceutical industry, such as the feed of fluids for extrusion or spray distribution during the production of active ingredients and tablet production.

Metering sensitive liquids such as enzymes, vitamins or flavoring agents with LEWA ecodos sanitary.
Adding additives such as colorants in the chemical industry

Gentle metering of high-viscosity liquids during the production of biofuels, for example
LEWA ecodos meters everything, whether emulsions or slurries, bases or acids, paints or varnishes, detergents or solvents, grease or oils, hazardous or poisonous liquids, with maximum precision, safety and reliability.
For a wide variety of requirements. LEWA ecodos pump heads.

The LEWA ecodos series provides pump heads for all types of fluids. They are made of stainless steel or non-metallic materials. Two special designs are available for applications that require hygienic design.

Stainless steel pump head*

For industrial or sanitary applications

Technical data:
– Discharge pressure up to 290 psig
– Flow rate up to 396.26 gph per pump head
– Temperatures from +14 to +176 °F

Outstanding advantages:
– Stainless steel design with DIN or ANSI connections
– Available as a sanitary design: wetted parts RA < 0.5µm, mechanically polished
– Triclamp or alternative sterile connections
– Suitable for Ex zone 1 (II 2 G)

Non-metallic pump head (PVC/PVDF/PTFE-C)

The economical option for industrial applications

Technical data:
– Discharge pressure up to 174 psig
– Flow rate up to 396.26 gph per pump head
– Temperatures from +32 to +176 °F (+140 °F PVC)

Outstanding advantages:
– Suitable for acids and bases
– PTFE-C suitable for Ex zone 1 (II 2 G)

* Material fulfills requirements of 316/316L.
1.4435 stainless steel pump head

Hygiene-compliant design without compromise

Technical data:
- Discharge pressure up to 290 psig
- Flow rate up to 396.26 gph per pump head
- Temperatures from +14 to +176 °F

Outstanding advantages:
- Minimum dead spaces
- Optimized working area
- Easy surface cleaning
- Gentle, low-shear fluid metering
- Corrosion resistant
- Wetted parts, Ra < 0.5 µm, electro-polished
- CIP capable
- SIP capable up to 302 °F

Polypropylene pump head

The economical option for hygienic applications

Technical data:
- Discharge pressure up to 87 psig
- Flow rate up to 92.46 gph per pump head
- Temperatures from +14 to +140 °F

Outstanding advantages:
- Cost effective design for low pressures
- Minimum dead spaces
- Optimized working area
- Gentle, low-shear fluid metering
- Very good chemical resistance
- Extremely low life cycle costs
- CIP capable
- EPDM* or FFPM* gaskets
- Valve seats made of highly wear resistant PEEK**

* EPDM (ethylene propylene diene monomer): Highly elastic elastomer with good temperature resistance, FFPM (perfluorinated): Chemically highly resistant elastomer with high temperature resistance level
** PEEK (Polyether ether ketone): High-strength plastic with high levels of reverse bending stiffness and very high temperature resistance
For safety and profitability. LEWA ecodos technology.

The LEWA ecodos is a mechanically actuated metering pump with a monitored, 4-layer sandwich diaphragm for low pressures, which has numerous advantages over comparable pumps. The sanitary/hygienic designs are specifically adapted for hygiene-compliant product requirements.

Low-wear valves for a variety of tasks
Operational reliability and service life are decisively dependent on valve quality. The valve design is therefore adapted to the specific application.

Safe and resistant
The 4-layer safety diaphragm made of PTFE consists of two operating diaphragms, one monitoring diaphragm as well as one pressure-resistant safety diaphragm. This ensures that no conveyed fluid leaks; contamination from drive unit oil is impossible. The PTFE material is resistant to nearly all liquids and is highly durable.

The right material for every fluid
Stainless steel is used as a standard material. Material options in the conductive design are PVC-H, PVDF and PTFE. Stainless steel materials 1.4435 or PP are available for selection for pump heads in the hygienic design.

Diaphragm monitoring system for reliable status indication
The standard diaphragm monitoring system reliably shows the status of the diaphragm. Production can be stopped without danger in any case. The indication is realized via a pressure signal.

Low clearance volume, short dwell time
The clearance volume in the working chamber can be kept low by optimizing the design of the pump head. The fluid flow is designed to ensure the easy execution of flushing and drying procedures.

Hermetically tight
The pump heads are hermetically tight and low-maintenance. The diaphragm drive is sealed off from the drive unit so that no drive unit oil can spill out when replacing the pump head.
High metering accuracy, gentle conveyance
The metering pumps provide high level of metering accuracy and gentle conveyance, the stroke can be adjusted (manually or electrically) and the stroke frequency can also be adjusted using the frequency inverter. The reproducibility of the adjustments is better than ±1%.

Robust drive unit for continuous operation
LEWA ecodos drive units are designed for continuous operation. Spring-cam drive units are used for LEWA ecodos LEB to LEF while variable eccentric drives are used for higher performance.

Aseptic design of piping for quick replacement
Process connections common for the pharmaceutical industry ensure they can be dismantled easily for inspection and maintenance purposes as well as for easy installation.

Optimized sanitary valves for perfect cleaning
Minimum dead space seals on valves ensure optimal cleaning. The gaskets are completely confined and cannot make their way into the product space. This means that all valve components are streamlined and optimized for sterile applications.

Flat surfaces for easy cleaning
All metallic pump head materials consist of 1.4435 chrome-nickel steel with a delta ferrite content of < 1%. The wetted surfaces are mechanically and electrically polished with a surface quality of < 0.5 μm. Due to the highly polished tools, the plastic version also achieves a roughness value Ra of < 0.5 μm.

Materials for absolute safety
Only materials that are physiologically harmless are used as wetted materials. The plastics and elastomers used correspond to the FDA requirements and are documented for USP Class VI.
For the most stringent purity requirements.
Sanitary and hygienic design.

The sanitary and hygienic-compliant designs fulfill the requirements for the production of food and pharmaceuticals. The pump heads made of polypropylene or stainless steel are hermetically tight and prevent the pumped product from becoming contaminated. Thanks to its easy-to-clean surfaces, product residue, biological residue and germs can be removed completely.

**Benefit to you:**

- Metering free of contamination
- Low dwell volume
- Gentle, low-shear metering
- Minimum dead spaces
- Exact, repeatable metering
- Mechanically or electrically polished surfaces
- Optimized working area
- Aseptic design of piping
- CIP/SIP capable

**Fulfilling the standard regulations for hygienic processes:**

- Wetted plastics: FDA-compliant, animal free and documented for USP Class VI
- ASME-BPE-compliant (hygienic)

**Available documentation:**

- Performance test and pressure test
- 3.1 certificates for all wetted materials
- Surface certificates
For the best possible configuration.
Designs, options, accessories overview.

Depending on the desired flow rate and the control range needed, the correct rating is selected from the six LEWA ecodos output ratings, or multiple pumps are combined to make a multiplex pump. Different designs are available for pump heads, the metering flow setting, stroke adjustment and speed control. LEWA ecodos can be adapted to a wide variety of jobs with customized control systems as well as a complete line of accessories. The pumps of course meet all of the requirements for integration into automated systems.

Designs

Variable metering flow
Stroke length adjustment using the handwheel or actuator, the stroke frequency using the motor with the frequency inverter or servo drive.

Exact stroke adjustment
- Manual stroke adjustment
- Electric stroke adjustment with stroke length setting and limit-switch shut-off for LEWA ecodos LEB-LEE
- Electric stroke adjustment as well as emergency operation using the handwheel is possible for LEWA ecodos LEG or later with integrated position regulator, guide signal and 4-20 mA (factory setting), optional 0-20 mA
- Without stroke adjustment for the speed control

Precise speed
Expanding the adjustment range using the frequency inverter or servo drive:
- Frequency inverter for engine outputs of 0.37-7.5 kW
- 1-phase or 3-phase device design
- Servo drive with complete control unit

New: Wide-range speed-control
Possibility to control in a wide speed range of more than 1:100 (up to LEF type). Servo motors or 3-phase motors with speed feedback are used as the drive. Preferred solution for multiplex pumps.

Advantages
- Large adjustment range with only one control variable
- Linear performance curve
- Low pulsation for triplex to hexaplex pumps
- Gentle start possible
Options

Multiplex capability
– Single drive units with vertically installed motor are space-saving
– Multiple drive units with identical or different output can be combined for pulsation reduction or recipe metering

Drives
– Use of IEC motors from renowned manufacturers:
  – 3-phase motor 230/400V, 60 Hz
  – IP55 protection class, isolation class F
  – Optional with explosion-proof drives for operation up to zone 1
  – Other motors, voltages and protection classes on request

– LEWA Intellidrive
Special solutions can be provided using the highly dynamic servomotor LEWA intellidrive as a drive concept (up to type LEF)
Possibilities:
– Low-pulsation flow rate using wide control range with two or three single pumps
– Controlled individual strokes or partial strokes, e.g. for filling processes; synchronization with higher-level control systems
– Pulsator with modifiable characteristics, e.g. for back flushing filters

Valves
Insert rings for stainless steel pump head valve seats made of:
– PTFE
– FPM
– Polyurethane
– Tempered stainless steel 1.4122 SS
As well as special valves such as cavities being filled for the production of food and pharmaceuticals.

Integration into process control systems
The signal acquisition of process control systems is carried out in analog or digital form. The flow rate can be varied using electrical or pneumatic stroke adjustment, or alternatively by motor speed (frequency converter).

Complete documentation
The documentation is created according to customer specifications, provision of inspection records upon request, pressure samples, pump curves and registration papers.

Accessories

– Pulsation damper
– Control and regulation units
– Safety valves
– Pressure retaining valves
– Strainer
– Injection points

– Instrumentation: Contact transmitter attachment on the last drive element as well as determining the number of pump strokes, e.g. for batch metering and balancing.
– Inductive proximity switch based on NAMUR (DIN19234)
– Explosion protection Exi
– IP65 protection

Complete solutions from a single source.
LEWA packages and systems.

LEWA also offers solutions that go beyond individual process or metering pumps. For decades, we have built customer-specific systems, skids, and packages. Our service ranges from engineering to commissioning – including custom system controllers, process visualization, operational data collection, and external interfaces to the process control system.

We guarantee optimal implementation of your requirements thanks to our knowledge and skills in smart process control and the control and regulation technology it requires.

The basis is the competent selection and combination of system components and their characteristics. The core component of LEWA packages and systems is a process pump.

Creating Fluid Solutions.
Driven by our commitment, our trendsetting products and innovative technologies have set benchmarks for diaphragm pumps, process pumps and metering systems for over 60 years. We solve complex tasks from a single source. That ranges from custom pump design, basic and system engineering, global project management, and pretesting to commissioning and maintenance on site. Our consistent drive always to develop the best solutions for the customer provides you with a competitive advantage and visible added value.
